## CHRYSLER eVID

Over VUE

eVID is an inventory application used by Stellantis (FCA) which imports vehicle inventory and invoice updates to VUE on a daily basis. The dealer can review that vehicle information and choose to add it to their inventory.

Step by Step

Once OEM communications have been turned on through Chrysler, you will find the eVID orders in the OEM DCS > Chrysler > eVID screen. Once the grid opens, make sure you toggle to Non-Imported, and all vehicles orders will show.

Click on the vehicle you wish to import into inventory. (Note: there must be a full VIN in order to import) Click the Add button at the bottom of the pop-out screen. You must assign a stock number to the vehicle if not automatically assigned by the system.
