

GM VEHICLE INVENTORY SERVICE (VIS)

Over VUE

VIS reports allow dealers to view vehicle information on demand, including vehicle history, open service campaigns, recalls, and warranty coverage.

Adding a Vehicle to Inventory through the GM VIS feature

Once services have been turned on through GM Global Connect, you will find GM vehicle orders in the OEM DCS > GM > Vehicle Invoice Service screen. Once the grid opens, make sure that you toggle to Non-imported, and all non-imported vehicle orders will show.

Click on the vehicle you wish to import into inventory. (Note: there must be a full VIN in order to import.) Click the Add to Inventory button in the action ribbon. A stock number must be assigned to the vehicle if one is not automatically assigned by the system. You may also view the invoice from this screen prior to adding vehicle to inventory.
